7. EXPERTISE/BODIES CONSULTED	19
8. PROPOSED ccTLD FOR KONKANI	20

1. AUGMENTED BACKUS-NAUR FORMALISM (ABNF)

1.1 Declaration of variables

Dash → Hyphen -
 Digit → Indo-Arabic digits [0-9]
 C → Consonant
 M → Matra
 V → Vowel
 D → Anusvara
 B → Chandrabindu
 X → Visarga
 Y → Avagraha
 H → Halant

1.2 ABNF Operators

S. No.	Symbols	Functions
1	“/”	Alternative
2	“[]”	Optional
3	“*”	Variable Repetition
4	“()”	Sequence Group

In what follows the Vowel Sequence and the Consonant Sequence pertinent to Konkani are given.

1.3 The Vowel Sequence

A vowel sequence is made up of a single vowel. It may be followed but not necessarily (optionally) by an Anusvara (D),Chandrabindu (B) or a Visarga (X). The number of D, B or X which can follow a V in Konkani may be restricted to one.

The vowel sequence in Konkani is therefore V [D | B | X]

Examples:

Vowel	V	अ
Vowel + Anusvara	V[D]	अं
Vowel + Chandrabindu	V[B]	अँ
Vowel + Visarga	V[X]	अः

1.4 Consonant Sequence

A consonant sequence admits the following shapes:

1. A single consonant (C)

Example:

C	क
---	---

2. A consonant optionally followed by dependent vowel sign[M] or Anusvara[D] or Chandrabindu[B] or visarga[X] or Halant [H]

C[M|D|B|X|H]

Example:

C[M]	कि
C[D]	कं
C[B]	कँ
C[X]	कः
C[H]	क् (Pure Consonant)

2.a. A CM sequence can be optionally followed by D, B or X

(CM)[D|B|X]

Example:

CM[D]	की
CM[B]	काँ

CM[X] वीः

3. A sequence of consonants (up to 4) joined by Halant *3(CH)C
Example:

CHCHCHC च्छ्र्य न+ङ्+क+ङ्+र+ङ्+य

Subsets

3.a. The combination may be followed by M , D,B or X

Example:

CHC[M] ककी क ङ् क ठी

CHC[D] ककं क ङ् क ठं

CHC[B] ककँ क ङ् क ठँ

CHC[X] ककः क ङ् क ठः

3.b. *3(CH)CM may be followed by a D, B or X

Example:

CHCM[D] ककर्णि क ङ् क ठी ठं

CHCM[B] ककर्णि क ङ् क ठी ठँ

CHCM[X] ककर्णः क ङ् क ठी ठः

The final canonical structure of the consonant sequence in IDN can be defined in ABNF as:

*3(CH)C[H|D|B|X]|M[D|B|X]]

It should be noted that in the case of Sanskrit the possible sequence could be:

*4(CH)C [H|D|B|X ||M[D|B|X]]

as exemplified in the word:

कात्स्न्य

Although this is possible, it is not used in neo-Prakrits unless a potential client chooses it as a possible IDN.

1.5 Sequence

1. A sequence can be made up by Consonant-sequence or Vowel-sequence.
 1. a A Consonant-sequence can optionally be followed by Avagraha[Y].
 1. b A Vowel-sequence can optionally be followed by Avagraha[Y].

1.6 ABNF Applied to the KONKANI IDN

The formalism can be applied to create/validate IDN labels. So a valid IDN label can be defined as follows.

Vowel-sequence → V [D | B | X]

Consonant-sequence → *3(CH)C [H|D|B|X |M[D | B | X]]

Sequence → consonant-sequence[Y] | vowel-sequence[Y]

IDN-label → (sequence | digit) * ([dash] (sequence |digit))

Additional Examples putting more light on ABNF

Below are some of the examples which will help a casual reader understand some of the rules ABNF puts in place. These are just given for reference purposes and are not meant to be comprehensive.

1. H | D | B | X | M cannot occur in the beginning of an IDN domain name

Example:

ঙ্ক

ঁক

ঁঁক

ঠঁক

ঁিক

As can be seen they will result automatically in a “golu” marking an invalid character. This is an intrinsic property of the Indic syllable and is quasi automatically applied.

2. H is not permitted after V, D, B, X, M, digit and dash

Example:

অ

কঁু

কঁু

কঁু

কি

১ু

-ু

3. Number of D,B or X permitted after consonant-sequence or vowel-sequence or

M is restricted to one

Example:

कं॒

कँ॒

कः॒

की॑

काँ॑

कीः॑

अ॑

अँ॑

अः॑

4. Number of M permitted after consonant-sequence is restricted to one.

Example:

की॒ती

5. M is not permitted after V

Example:

ई॑

6. The combination of Anusvara+Visarga, Chandrabindu+Anusvara, Chandrabindu+ Visarga and vice-versa is not permissible.

Example:

कं॒

कँ॒

कः॑

2. RESTRICTION RULES

The ABNF is generic in nature and when applied to a specific language/script certain restriction rules apply. In other words, in a given language some of the Formalism structures do not necessarily apply. To take care of such cases restriction rules are set in place. These restrictions will help to fine-tune the ABNF.

In the case of Konkani the following rules apply:

1. Consonant र(0931) alone shall not be permitted in domain name. It must necessarily be followed by character sequence HC in which following two combinations are possible.

CHC र्य रः य u+0931 u+094D u+092F

CHC र्ह रः ह u+0931 u+094D u+0939

Following combinations still remain applicable though.

CHCH, CHCD, CHCB, CHCX, CHCM, CHCMD, CHCMB, CHCMX

2. A consonant sequence that is intended to end with Halant [H] can only be followed by Hyphen, digit or Avagraha [Y]. Thus following combinations are permissible.

क्-

क्१

क्५

3. Consecutive hyphens will not be permitted in a domain name.
4. The number of identical consonants joined by a Halant within a label shall not exceed two. Thus त (ta+halant+ta) is permitted but not त्त (ta+halant+ta+halant+ta).
5. Wherever a variant is present in a given label, the variants shall be in a relationship of transitivity but the generation of the variant table shall be limited only to the relationship existing between the two variants. Thus given a variant त

and त्, the number of variants in label such as किताब shall be किताब. कित्ताब generated by adding an extra त् to त् shall not be permitted. This ensures that over generativity does not take place.

6. A label containing not more than three "akshara", which have got variants shall be permitted. As an example let us consider a, b, c and d as four aksharas in a given label having a', b', c' and d' as variants in which case such a label will be disallowed. (E.g. of disallowed label - abcd, acdb, cdaba and so on)

3. EXAMPLES

Following are the some examples of KONKANI IDN.

Combination	Example	Word With Combination
C	स	सरकार
CH	म्	वदारण्यम्
CM	फा	फायदा
CD	सं	संबंदान
CB	लँ	पलँटा
CX	नः	पकोवनः
CMD	नां	नांका
CMB	काँ	काँग्रेस
CMX	दुः	दुःख
CHC	ह्या	ह्या
CHCHC	श्च	शश्चाचा
V	अ	अभ्यास
VD	आं	आंखले
VB	आँ	आँठार
